Experience

Niantic (8th Wall Acquisition) Palo Alto, CA

Senior Software Engineer, Technical Lead Manager (Applied AI) *May 2025 — Mar 2026*

- Built and led 8th Wall's applied AI team, directly managing 5 engineers across ML and full-stack while setting the AI roadmap for Niantic Studio.
- Launched 8th Wall Agent, a VS Code-compatible multimodal coding agent backed by a built-in MCP server for generating 8th Wall code and editing proprietary scene graphs and prefabs, doubling the addressable user base and increasing daily active developers by 20%.
- Launched 8th Wall Asset Lab, generative AI tooling for image and 3D creation in Niantic Studio, cutting project development time 50%, opening a new revenue stream, and making users 2.7x less likely to churn.
- Fine-tuned Qwen-2.5-Coder 7B and 32B on 25K+ prompt/code pairs using PyTorch and Hugging Face, achieving 55% Pass@3, 15 points above prompt-engineered baselines.

Senior Software Engineer (Infrastructure) *Feb 2024 — May 2025*

- Architected and launched Niantic Studio Backend Services, a patented client/server platform that deploys version-pinned backend functions into per-app serverless environments, securing API keys and game logic while eliminating up to a week of separate infrastructure setup.
- Built AI platform services on AWS Bedrock and AppSync, including streaming APIs, prompt caching, LLM evaluation workflows, shared auth middleware, and credit accounting that powered agentic features in Niantic Studio.

Software Engineer (Infrastructure) *Mar 2022 — Feb 2024*

- Re-architected the highest-traffic request path for user-built apps from 6 regional application clusters backed by Postgres read replicas to a global Lambda@Edge architecture backed by CDC-replicated DynamoDB, cutting AWS spend by 20% and reducing latency worldwide.
- Created a durable change data capture (CDC) platform that became a core internal service at 8th Wall for marketing systems, analytics, abuse detection, edge replication, and state synchronization workloads.
- Built an authorized WebSocket platform and companion client library for synchronizing shared state across users in 8th Wall's developer console without polling.

8th Wall Palo Alto, CA

Software Engineer II (Full-Stack) *Jul 2021 — Mar 2022*

- Engineered search and discovery infrastructure powering all major content surfaces on 8thwall.com, including search APIs, indexing pipelines, ranking algorithms, and OpenSearch tuning.
- Built an at-request-time image transformation service on Lambda@Edge, CloudFront, and S3 that improved asset performance and reduced frontend complexity.

Software Engineer (Full-Stack) *Jun 2020 — Jul 2021*

- Built a Chrome DevTools-like console in 8th Wall's Cloud Editor with live build status, expandable linked stack traces, and reversible command history search.
- Shipped creator-facing profile, project, and code-sharing features that expanded public discovery and user-generated content across the platform.

Lawrence Livermore National Laboratory Livermore, CA

Software Engineer Intern (Full-Stack) *May 2019 — Aug 2019*

- Built an internal web application for scientists to store, manage, and distribute classified information.

Education

California State University, East Bay Hayward, CA

Bachelor of Science, Computer Science *2018 — 2020*

- GPA: 3.898/4.0 (Dean's List)
