EXPERIENCE

Niantic (8th Wall Acquisition)

Palo Alto, CA

Senior Software Engineer, Technical Lead Manager (Applied AI)

May 2025 — Mar 2026

- Built and led 8th Wall's applied AI team, directly managing 5 engineers across ML and full-stack while setting the AI roadmap for Niantic Studio.
- Launched 8th Wall Agent, a VS Code-compatible multimodal coding agent backed by a built-in MCP server for generating 8th Wall code and editing proprietary scene graphs and prefabs, doubling the addressable user base and increasing daily active developers by 20%.
- Launched 8th Wall Asset Lab, generative AI tooling for image and 3D creation in Niantic Studio, cutting project development time 50%, opening a new revenue stream, and making users 2.7x less likely to churn.
- Fine-tuned Qwen-2.5-Coder 7B and 32B on 25K+ prompt/code pairs using PyTorch and Hugging Face, achieving 55% Pass@3, 15 points above prompt-engineered baselines.

Senior Software Engineer (Infrastructure)

Feb 2024 — May 2025

- Architected and launched Niantic Studio Backend Services, a [patented](#) platform that lets developers add managed backend functions to apps with one click while handling infrastructure, secrets, builds, deployments, and versioning.
- Built AI infrastructure including streaming LLM APIs over WebSockets and SSE, durable workflow orchestration, LLM evaluation pipelines, auth middleware, and a credit-based billing system for monetizing AI usage.
- Built a RAG-powered chatbot for Niantic Studio's developer docs, implementing data ingestion, indexing, vector search, and guardrails for grounded responses.

Software Engineer (Infrastructure)

Mar 2022 — Feb 2024

- Re-architected the primary serving path for user-built apps from 6 regional Postgres-backed application clusters to a global edge serving architecture, cutting AWS spend by 20% and reducing P95 latency by 50% to 40 ms.
- Created a Kafka-based change data capture (CDC) platform for continuous replication from Postgres to DynamoDB and OpenSearch, powering edge serving and search indexing workloads.
- Built a WebSocket platform and companion client library for real-time shared state synchronization across users in 8th Wall's developer console.

8th Wall

Palo Alto, CA

Software Engineer II (Full-Stack)

Jul 2021 — Mar 2022

- Engineered search and discovery infrastructure powering all major content surfaces on 8thwall.com, including search APIs, indexing pipelines, ranking algorithms, and OpenSearch tuning.
- Built an at-request-time image transformation service on Lambda@Edge, CloudFront, and S3 that improved asset performance and reduced frontend complexity.

Software Engineer (Full-Stack)

Jun 2020 — Jul 2021

- Built a Chrome DevTools-like console in 8th Wall's Cloud Editor with live build status, expandable linked stack traces, and reversible command history search.
- Shipped creator-facing profile, project, and code-sharing features that expanded public discovery and user-generated content across the platform.

Lawrence Livermore National Laboratory

Livermore, CA

Software Engineer Intern (Full-Stack)

May 2019 — Aug 2019

- Built an internal web application for scientists to store, manage, and distribute classified information.

SKILLS

- Programming Languages: JavaScript/TypeScript, Python, Rust, SQL
- Technologies: AWS, Postgres, DynamoDB, OpenSearch, Kafka, React, Node.js

EDUCATION

California State University, East Bay

Hayward, CA

Bachelor of Science, Computer Science

2018 — 2020

- GPA: 3.898/4.0 (Dean's List)
